## Conference: Morning, June 17, 2014 (Tuesday)

Venue: Diamond Room, 5/F

09:00-09:10	Opening Remarks <b>Professor Yixun Shi</b> Faculty of the Department of Mathematics, Computer Science and Statistics, Bloomsburg University of Pennsylvania, USA
09:10-09:40	Keynote Speaker Speech 1 <b>Professor Beng Soo Ong</b> Dept. of Marketing & Logistics Craig School of Business, California State University, USA <b>Title: Benefits and Challenges to Adoption of Blended Learning</b> <b>Abstract:</b> Shifting to completely online classes was the cool thing in the last several years, and most colleges and universities currently do offer some online courses, or choice of traditional course sections or online options. On the more extreme end of the spectrum are totally online universities, or programs which can be completed exclusively online. Even more recently, a course format called Massive Online Open Course (or MOOC) has received sensational press attention. However, education and traditional classrooms are undergoing another and different transformation --Blended Learning. The abilities to create one's own online video presentations and the abundance of crowd-sourced educational videos have enable teachers/instructors to "flip the classroom" where students watch online streamed lectures and presentations at home (as homework now) and participate in problem-solving, exercises, and group projects in class. Hence,

	<p>the phrase “flipped classroom” is often used to describe this blended learning pedagogy. The “flipped” approach is more than just supplementing class materials with online readings or videos, or equipping every student with a tablet or laptop in class. Blended learning adoption is being contemplated today because a majority of the students’ way of learning has changed, and technology and information resources are widely and affordably available to enable this flipped format. Blended learning will have more massive adoption than MOOCs or exclusively online courses as elementary/primary schools to colleges to corporations can engage, or have engaged in flipping their traditional classrooms to various extents.</p>
<p>09:40-10:10</p>	<p style="text-align: center;"><b>Keynote Speaker Speech 2</b> <b><i>Professor Yixun Shi</i></b></p> <p style="text-align: center;">Faculty of the Department of Mathematics, Computer Science and Statistics, Bloomsburg University of Pennsylvania, USA</p> <p><b>Title: Teaching College General Education Classes</b></p> <p><b>Abstract:</b> In United States, as well as in a number of other nations, university and college have a set of required General Education Classes for undergraduate students to take. The purposes of general education are to help develop students’ ability to think critically and communicate clearly, to let students have an entire university experience, to assure broad exposure to areas of study beyond the major, and to foster a deeper understanding of the world. However, many students come to general education classes with low interests; see those classes as a burden instead of benefit. All they want is to pass those classes and get done with them. In order to achieve the purposes of general education, we need to raise student interests in these classes. This presentation proposes two strategies to raise student interests: (1) teaching the subjects through applications and examples that most students may like to see, such as games, and (2) teaching the subjects within the contents of students’ major study fields so that students feel that the class is relevant. In this presentation, I will give a few examples of applying those strategies in teaching general education mathematics classes.</p>

M00010-Pre	<p>The Impact of Collaboration on the Success of Marketing Innovation among Companies in Indonesia</p> <p><b>Aprihatiningrum Hidayati</b>, Ciu Heny Meiria and Erlinda Nusron Yunus</p> <p><b>Abstract:</b> In the era of intensifying globalization, competition among companies has become severe, such that companies are required to make paradigm shifts in all areas to be more competitive. Studies have shown that companies will gain sustainable competitiveness through deliberate and continuous innovation. Nevertheless, studies examining marketing innovation –one specific type of innovation– are still rare in the literature. Marketing innovation encompasses new marketing method that includes significant changes in product design or packaging, product placement, promotion, and product pricing strategy. It emphasizes consumers, direct competitors, and the company’s position in the market. This study aims to examine factors that influencing marketing innovation and factors inhibiting innovation activities. In this study, a theoretical framework was developed to propose hypotheses concerning the influence of overall collaborative partners (in terms of consumers, competitors, and within the focal company) on marketing innovation. This study also attempts to investigate the effect of three moderating variables, namely cost, knowledge, and market barriers. In order to test the hypotheses, we surveyed 208 Indonesian-based companies, which encompass 41 industrial sectors. The largest percentage (that is, 13.5 percent of the total) was derived from financial and accounting service sector. Most of the respondents were at least at the managerial level and had at least 5 years of tenure. This study used hierarchical regression model to analyze the data. The result indicated that marketing innovation requires significant changes in product design or packaging, placement or distribution, promotion, and pricing. Marketing innovation will be successfully launched or implemented, only if companies engage in innovation</p>

	<p>activities with their consumers and competitors in the industry, as well as within their internal units or departments. Cost, knowledge, and market factors were found to be non-significant barriers in the relationship between collaboration and marketing innovation.</p> <p><b>Keywords:</b> Collaboration, Success, Marketing, Innovation</p>

B1004-Pre	Country Differences in Online Customer Reviews: Smartphones in China and the US <b>Linghui Tang</b> <i>Abstract</i> -Customers and users have increasingly become an important source of innovation and new product development. This paper compares online customer reviews on iphone4 and Galaxy s3 from Amazon and Guome. It was found that Chinese reviews were shorter and tended to have higher ratings and less emotion-labeling words than those from the US. These findings are consistent with cross-cultural research in consumer behaviors. Therefore, companies need to heed the differences in culture when incorporating online customer feedback into their global marketing and innovation strategy.
